36. Given below are two statements : one is labelled as Assertion A and the other is labelled as Reason R :

Assertion A : Acetal / Ketal is stable in basic medium.

Reason R : The high leaving tendency of alkoxide ion gives the stability to acetal/ ketal in basic medium.

In the light of the above statements, choose the correct answer from the options given below :

- (1) A is true but R is false
(2) A is false but R is true
(3) Both A and R are true but R is NOT the correct explanation of A
(4) Both A and R are true and R is the correct explanation of A

Sol. **1**

Acetal and ketals are basically ether hence they must be stable in basic medium but should break down in acidic medium.

Hence assertion is correct.

Alkoxide ion (RO^-) is not considered a good leaving group hence reason must be false.

37. A cubic solid is made up of two elements X and Y. Atoms of X are present on every alternate corner and one at the center of cube. Y is at $\frac{1}{3}$ rd of the total faces. The empirical formula of the compound is

Sol. **4**

$$\text{Number of X-atom per unit cell} = 1 + 4 \times \frac{1}{8} = \frac{3}{2}$$

$$\text{Number of Y-atoms per unit cell} = 2 \times \frac{1}{2} = 1$$

\therefore Empirical formula of the solid is X_3Y_2 .

$$r_{\text{Be}^{3+} \text{ } n=3} = 0.529 \times \frac{(3)^2}{4}$$

$$\frac{r_{\text{Li}^{2+} \text{ } n=2}}{r_{\text{Be}^{3+} \text{ } n=3}} = \frac{\frac{r_0 \times (2)^2}{3}}{\frac{r_0 \times (3)^2}{4}}$$
